Review for Final Exam (which is 25% of overall grade, May 14, 2015 CCC Room 111, 12:30 pm - 2:30 pm)

Of the following 96 problems, the second problem of each set of two will be solved at the black board in class. Thus the final exam will have 48 problems, of the following 96 problems, worth 2 points apiece. My brother-in-law will flip a coin which will decide which one of the two from each set of two goes on the exam. Happy studying! I may ask you, at the end of the final, to think of how you may apply the information you learned in Math 111 to your future life.

On second thought, as I do this review I've noticed the problems are more time consuming than first thought so.... how about I randomly throw out three sets of problems per chapter so the test has 33 problems worth 3 points each instead of 50 problems worth 2pts. each. So now the exam will have 33 or the original 50 problems on it.
